**Joshua Cedric B. Velitario**
**Dwayne Lester O. Diaz**
**Kian Carlo O. Matutina**
**Hafsah A. Tuzon**

**Submitted to:**
**Dr. Guillermo V. Red, Jr, DIT**

**April 2026**

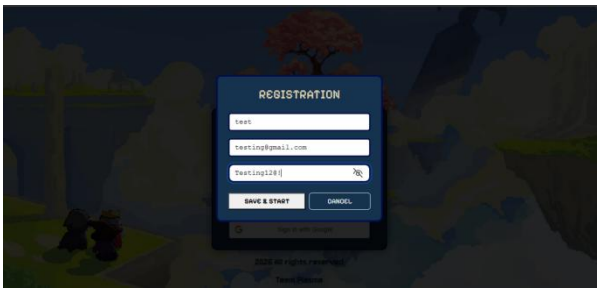
## Introduction

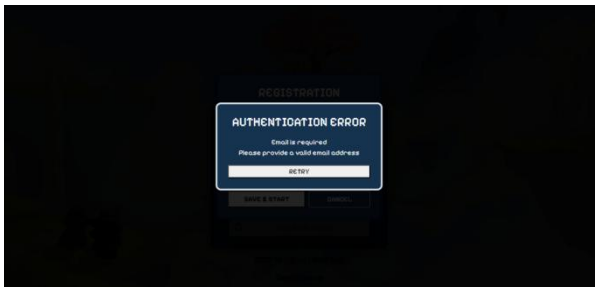
Phase 3 focuses on developing the system's frontend based on the approved design documents, including the ERD, use case diagram, and system architecture. In this phase, the planned features are translated into responsive web pages using HTML, CSS, and Bootstrap 5.

The goal is to create consistent and functional user interfaces that reflect the system's data and interactions, while preparing the pages for future backend and API integration.

## I. Screenshots of all working frontend pages and Annotation showing which feature/use case each page covers.

- **User Sign up**





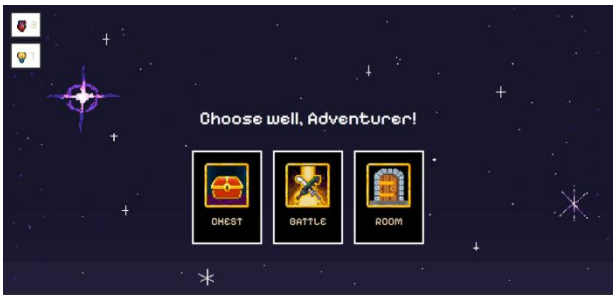
(Registration) (Error Modal)

The authentication gate page is where the users verify their accounts that would be used to sign in. This Error Modal pops up if you try to sign in without using a valid email.

- **Home**

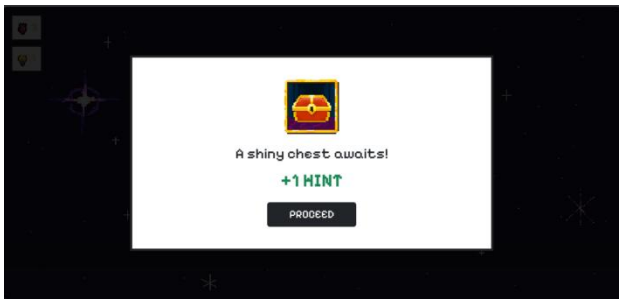
Upon registration, it takes you to the Home of your app, where you can access the other functions of your game; the play, leaderboard, learn, and settings.

- **Gameplay**



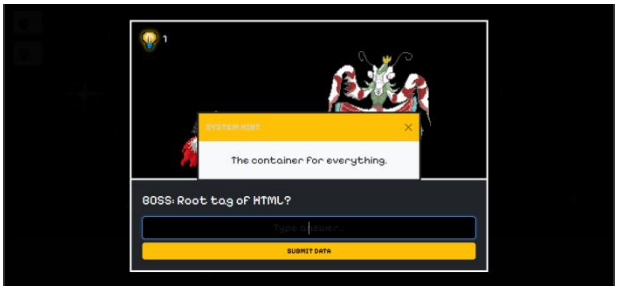
(Paths)

This shows up when you start the game or every time you already chose one among them.



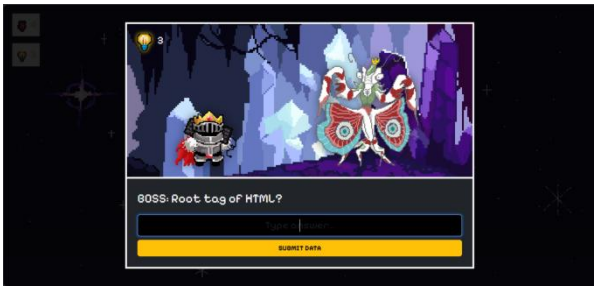
(Chest)

This pops out when you pick the chest among the three choices.



(Hint)

If you have encountered any difficulty with the questions, you can use hints as a guide to find the right answer

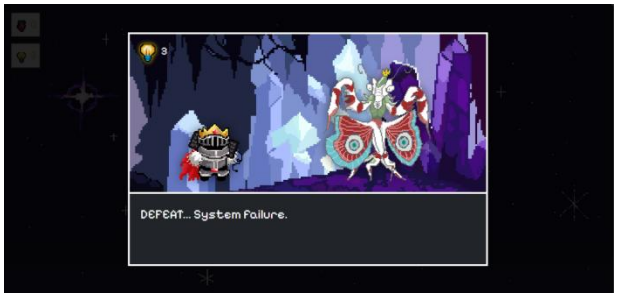


(Battle)

This is where the user/player will enter his/her answer based on the questions given by the Enemy.

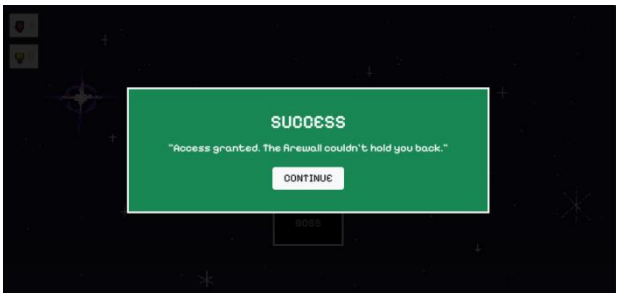
(Mistake Notification)

This modal appears whenever the player makes a mistake.



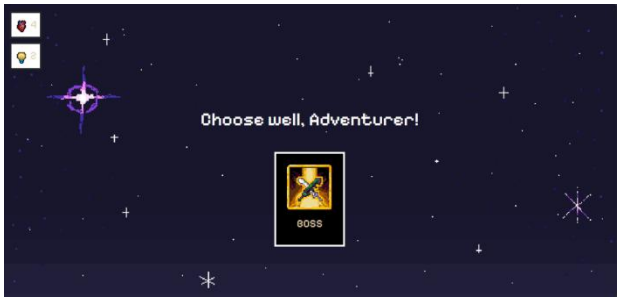
(Defeat)

This shows a message indicating the player has been defeated. It signals the end of the attempt.



(Completed Battle)

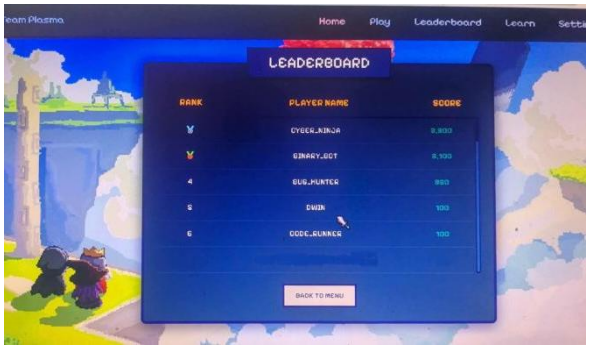
This displays a clear message indicating the enemy has been defeated. It confirms the player's success.



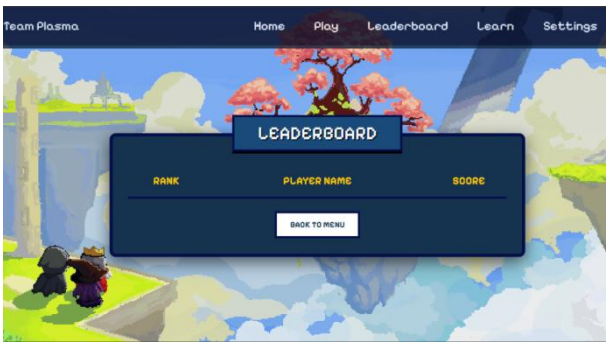
(Final Battle)

This shows up at the end of the path

- **Leaderboard**



(with records in)



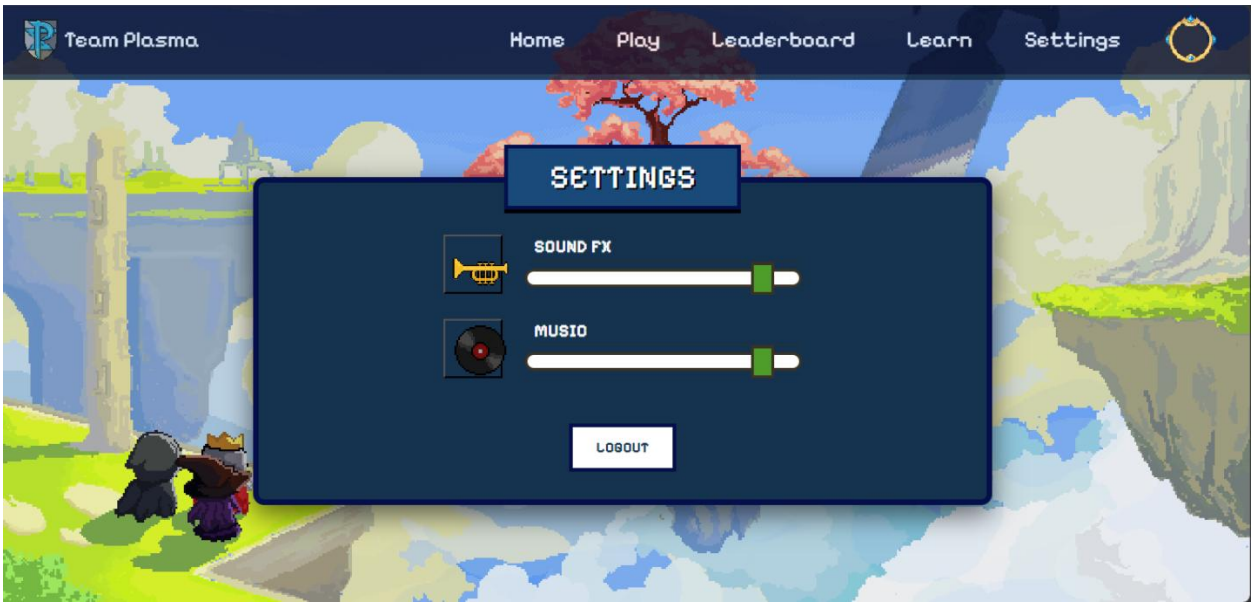
(without records)

The leaderboard shows player rankings with three fields: rank, player name, and score. It displays each player's position based on performance, allowing easy comparison.

- **Learn/Game Mechanics**

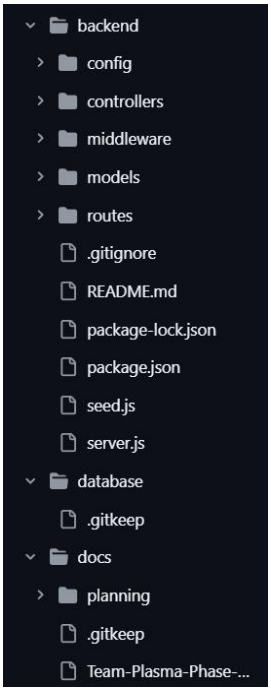
This game's mechanics refer to the rules and systems that control how the game works. These include player actions, objectives, interactions, and progression throughout the game.

- **Settings**

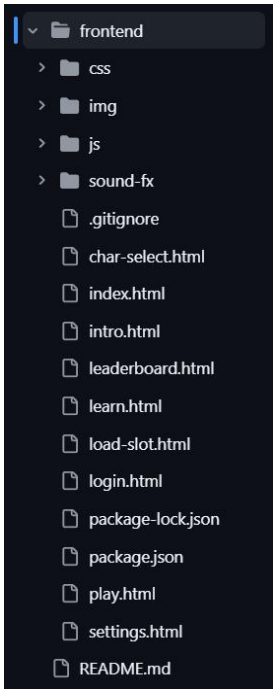


The game's UI settings allow players to adjust sound effects and music. It also includes a logout option for easy and secure exit.

## II. Screenshot of GitHub folder structure



(Backend Folder Structure)



(Frontend Folder Structure)

## III. Individual reflections from each group member

- **Sophia Mae Alodia J. Balmaceda:** *Backend Developer and Project Manager*

Designed several backgrounds using Piskel. Assisted with frontend development. Also made adjustments to the backend and prepared it for integration once the frontend was completed.

- **Dwayne Lester O. Diaz:** *Frontend Developer*

Focused on frontend development. Worked carefully and consistently on this part of the project. Guided the design team in decisions such as pixel sizing and image resolution.

- **Joshua Cedric B. Velitario:** *Database Manager*

Assisted in preparing the laboratory report. Created and expanded the in-game dialogue, including modals, scenery text, and character interactions. Developed dialogue for different characters and enemy encounters.

- **Kian Carlo O. Matutina:** *Documentation Officer*

Served as the documentation officer. Took screenshots of the project for records. Led the preparation of the laboratory report.

- **Hafsah A. Tuzon:** *GitHub Manager*

Created several backgrounds using Piskel. Designed most of the game's sprites, including icons and images. Also assisted in preparing the laboratory report.
