Introduction

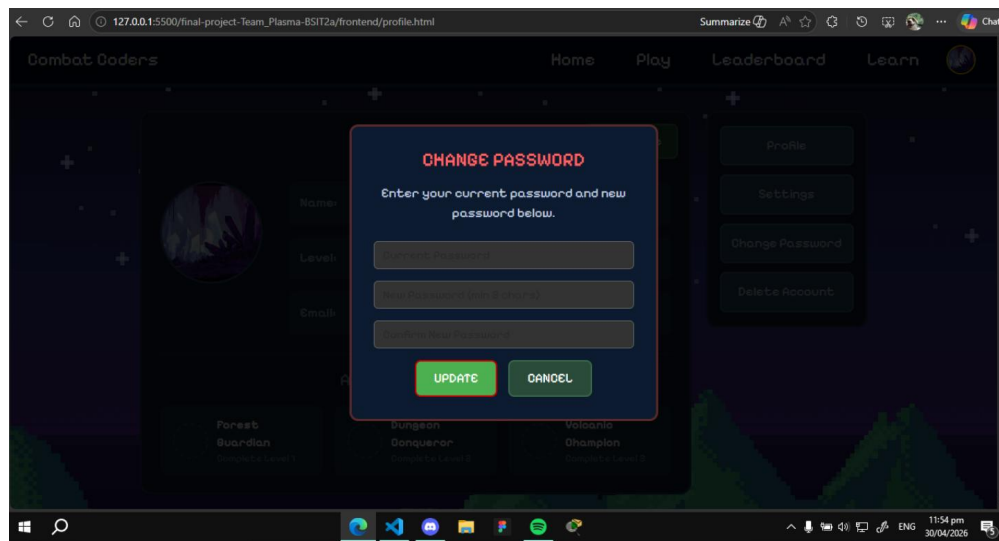

This lab focuses on completing the full CRUD functionality of the system by implementing Update (PUT) and Delete (DELETE) operations across the frontend, backend, and database. Students connect interactive UI elements such as edit modals and delete buttons to server-side endpoints, ensuring that changes are properly reflected in the database. Through this process, the group strengthens their understanding of API integration, event handling, and data consistency, marking the final step in developing a fully functional and dynamic web application.

I. Screenshots of working edit modal or page

This part demonstrates the functionality of the profile editing interface, including the main profile page and the change password modal. It highlights how users can update their personal information and securely modify their account credentials through an interactive UI.

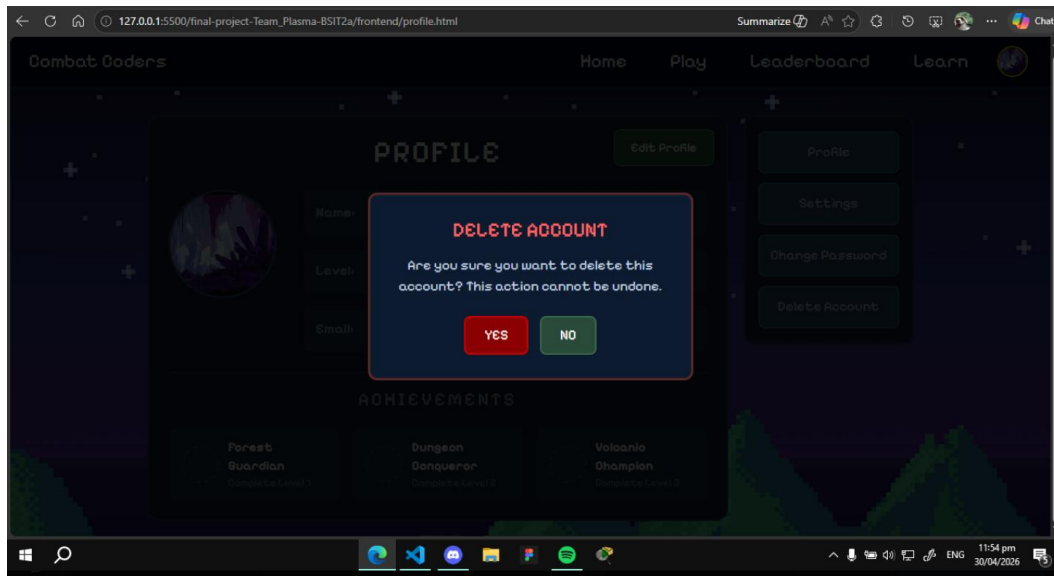

(Profile)

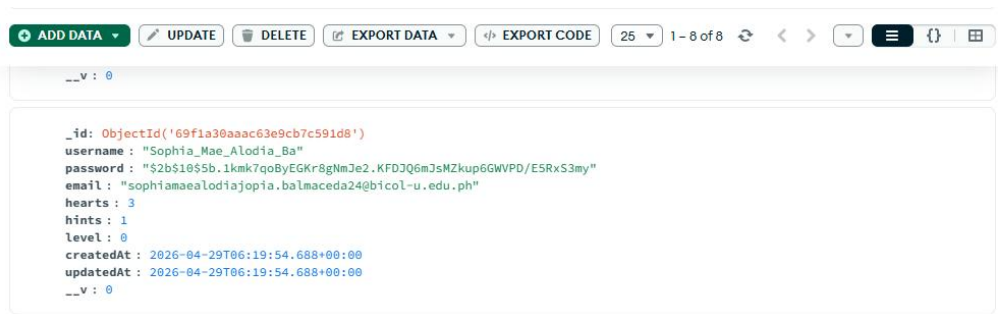

(Change Password Modal)

II. Screenshots of deletion confirmation and database updates

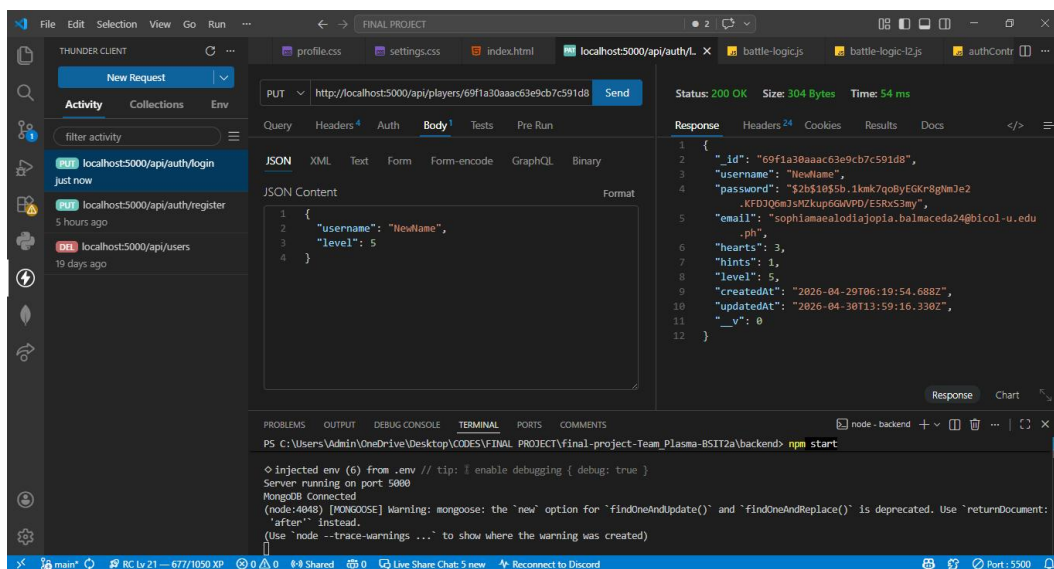

This part shows the delete confirmation modal and the process of updating user data. This also highlight the database state before and after applying changes.

(Deletion confirmation)

(Before updating)

(Testing PUT Update in Thunder Client)

```
ADD DATA UPDATE DELETE EXPORT DATA EXPORT CODE 25 1 - 8 of 8

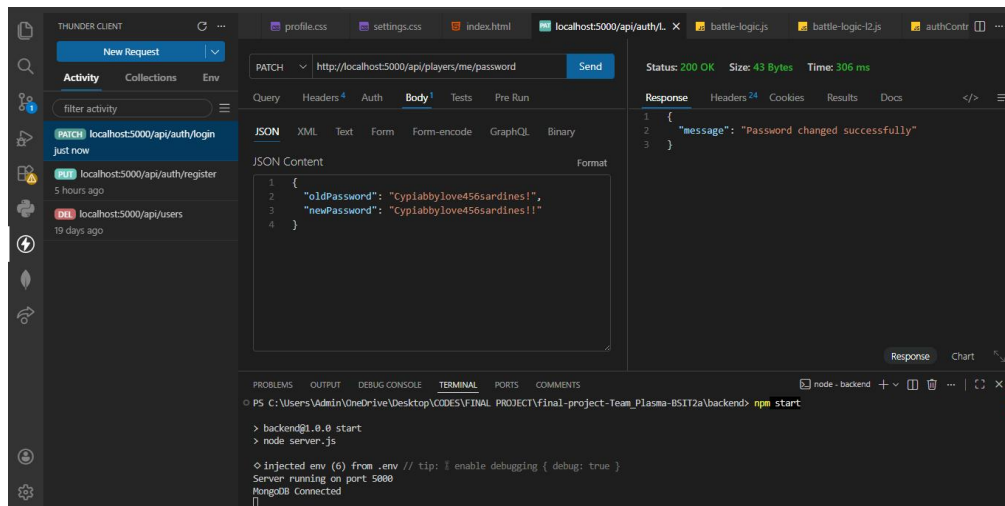

__v : 0

  __v: 0
}
```

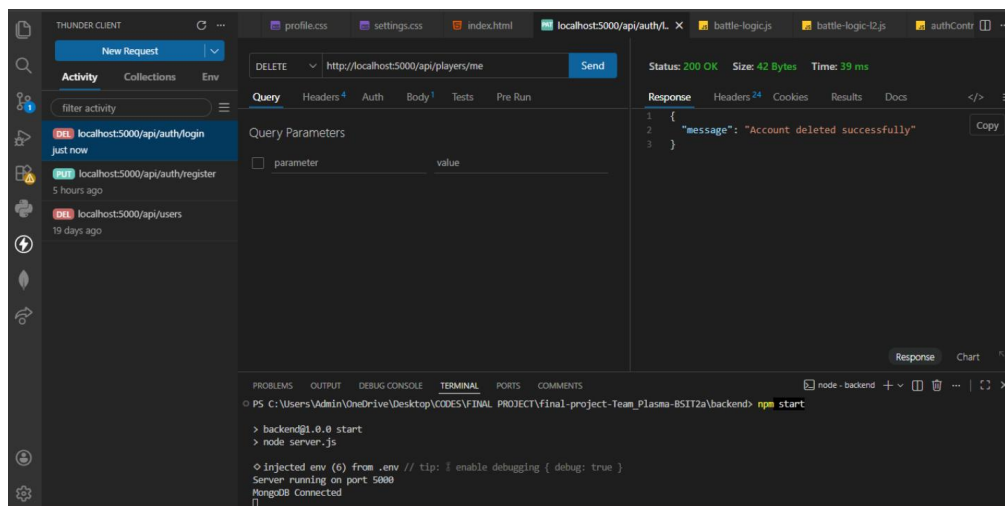

(After making updates)

III. JavaScript snippets for edit and delete

This part displays the practical application of the JavaScript "edit" and "delete" functionalities. This part shows an update via PATCH request, while the second shows deletion via DELETE request, both within the Thunder Client API testing tool.

(Password Change)

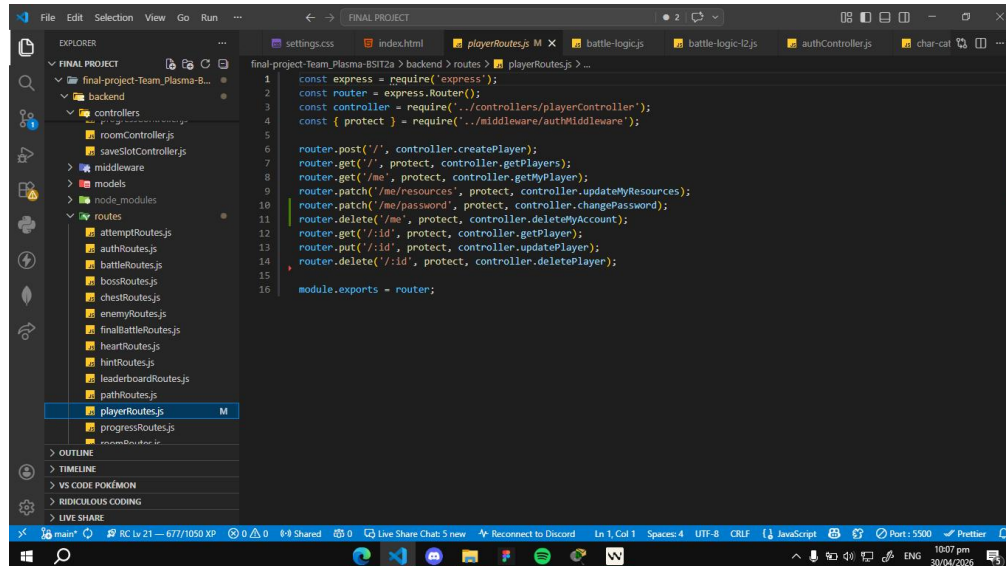

(Account Deletion)

IV. Backend route and controller snippets

This section outlines how backend routes map incoming requests to controller functions that handle core application logic. It also highlights key controller operations for managing player data and account security, including updates, password changes, and deletions.

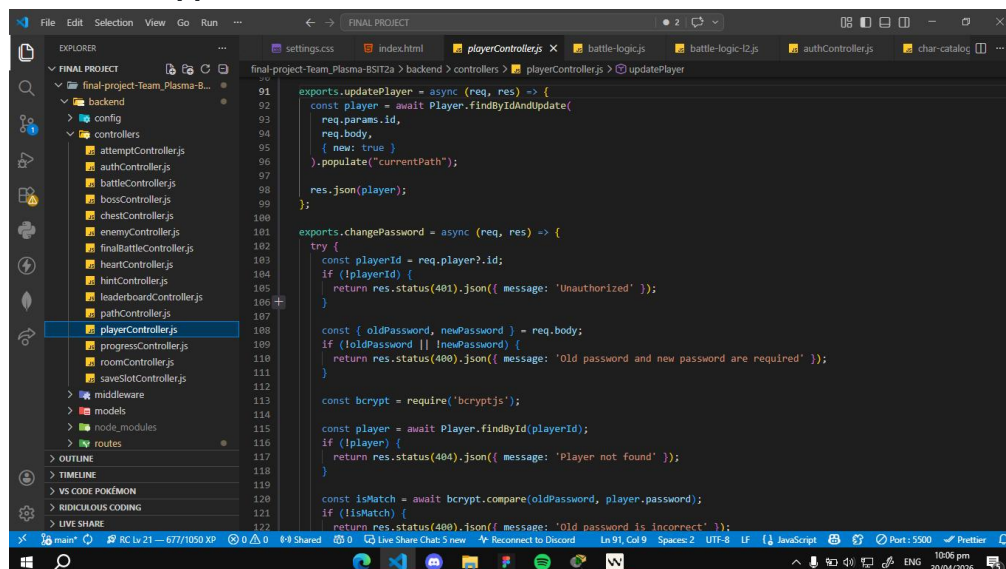

Backend routes

```
1 const express = require('express');
2 const router = express.Router();
3 const controller = require('../controllers/playerController');
4 const { protect } = require('../middleware/authMiddleware');
5
6 router.post('/', controller.createPlayer);
7 router.get('/', protect, controller.getPlayers);
8 router.get('/:id', protect, controller.getPlayer);
9 router.patch('/me/resources', protect, controller.updateMyResources);
10 router.patch('/:id/password', protect, controller.changePassword);
11 router.delete('/me', protect, controller.deleteMyAccount);
12 router.get('/:id', protect, controller.getPlayer);
13 router.put('/:id', protect, controller.updatePlayer);
14 router.delete('/:id', protect, controller.deletePlayer);
15
16 module.exports = router;
```

(PUT and DELETE at player routes)

Controller snippets

```
91 exports.updatePlayer = async (req, res) => {
92   const player = await Player.findByIdAndUpdate(
93     req.params.id,
94     req.body,
95     { new: true }
96   ).populate('currentPath');
97   res.json(player);
98 };
99
100 exports.changePassword = async (req, res) => {
101   try {
102     const playerId = req.player?.id;
103     if (!playerId) {
104       return res.status(401).json({ message: 'Unauthorized' });
105     }
106
107     const { oldPassword, newPassword } = req.body;
108     if (!oldPassword || !newPassword) {
109       return res.status(400).json({ message: 'Old password and new password are required' });
110     }
111
112     const bcrypt = require('bcryptjs');
113
114     const player = await Player.findById(playerId);
115     if (!player) {
116       return res.status(404).json({ message: 'Player not found' });
117     }
118
119     const isMatch = await bcrypt.compare(oldPassword, player.password);
120     if (!isMatch) {
121       return res.status(400).json({ message: 'Old password is incorrect' });
122     }
123   } catch (error) {
124     console.error(error);
125     return res.status(500).json({ message: 'Server error' });
126   }
127 }
```

(Changing password)

```
exports.deleteMyAccount = async (req, res) => {  
  try {  
    const playerId = req.player?.id;  
    if (!playerId) {  
      return res.status(401).json({ message: 'Unauthorized' });  
    }  
    const player = await Player.findByIdAndDelete(playerId);  
    if (!player) {  
      return res.status(404).json({ message: 'Player not found' });  
    }  
    res.json({ message: 'Account deleted successfully' });  
  } catch (err) {  
    res.status(500).json({ message: err.message });  
  }  
};  
  
exports.deletePlayer = async (req, res) => {  
  try {  
    const player = await Player.findByIdAndDelete(req.params.id);  
    if (!player) {  
      return res.status(404).json({ message: 'Player not found' });  
    }  
    res.json({ message: 'Player deleted successfully' });  
  } catch (err) {  
    res.status(500).json({ message: err.message });  
  }  
};
```

(Delete player and delete account)

Commits		
main	All users	All time
Commits on May 1, 2026		
Updated loading of save slots	piapipp committed 20 minutes ago	097bcd5
Commits on Apr 30, 2026		
Updated profile page with profile editing, change password, and account deletion	piapipp and sledgehimh committed 36 minutes ago	002b1dc
Updated patch and delete for player routes	piapipp committed 2 hours ago	03c2488
Updated backend models, routes, and controllers, Added OTP with verification, Implemented PUT and DELETE backend functions Adjusted the layout for character selection and Separated/Added correspo...	piapipp and sledgehimh committed 3 hours ago	797e1fc
Commits on Apr 29, 2026		
Added Google OAuth client	piapipp committed yesterday	3b6155a
Added connection on frontend to backend-render in api-connection	piapipp committed yesterday	8c67b54
Updated modals in authController.js	piapipp committed 2 days ago	551c7ad
Implemented the intro animation to index	piapipp committed 2 days ago	d11bd81
Updated footer section	piapipp and Copilot committed 2 days ago	e5a2f75
Updated saveSlotController and leaderboardController	piapipp committed 2 days ago	b919ebf
Updated frontend+backend connection, added functional icon profile dropdown, improved sign in and sign out, added about page, improved home page with game description and footer, game timer imple...	piapipp committed 2 days ago	b85cf27

VI. Short Reflections From Each Member

Sophia Mae Alodia J. Balmaceda: *Backend Developer and Project Manager*

Ensured the website and game functioned correctly and improved the frontend layout after deployment. Collaborated with the frontend developer to fix the authentication gate, API connections, and system controllers. Their work bridged the gap between the user interface and back-end systems to eliminate errors and improve overall quality.

Dwayne Lester O. Diaz: *Frontend Developer*

Led the frontend development while receiving support from the backend developer. Focused on building the profile layout and ensuring it displayed correctly. Additionally, worked on updating the character integration within the system and thoroughly tested and debugged the game to ensure a smooth user experience.

Joshua Cedric B. Velitario: *Database Manager*

Tested the game to look for bugs and features in both the UI and gameplay. Also checked MongoDB for any updates on account creation and deletion for signed-in accounts. Additionally, helped take the screenshots needed for the lab report.

Kian Carlo O. Matutina: *Documentation Officer*

Tested the game and looked for errors while playing the game. Also took documentations of the meetings and helped make minor adjustments with the code for the questions. And also, managed the laboratory report and finalized it.

Hafsah A. Tuzon: *GitHub Manager*

Created and checked the majority of the project designs, specifically the backgrounds and assisted with writing the lab report. Organized and finalized the screenshots provided by the project leader for the final document. Overall, they played a key role in both the visual and some technical parts of the report.
